

Scabies

positive pinnal-pedal reflex
(80% diagnostic)

Treat the Obvious

Foot licking dogs are pollen allergic (atopic) 85% of the time.

Perianal dermatitis is usually food allergy related.

Food allergy is most likely in Labradors and German breeds.

Food allergy should be suspected if the age of onset was less than 1 year or older than 5 years.

Lumbar dermatitis is flea allergy: use Capstar every other day for 1 month to confirm or rule out.

Rubbing the ear margin causing a reflexive rear leg itch response is associated with scabies 80% of the time.
